

## **AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph beginning on page 4, line 24 with the following amended paragraph:

--The present invention relates to a method for recording information in a hearing device and/or in a recording unit at least ~~temporally~~ temporarily operationally connected to the hearing device. The method consists in that a point in time of the recording and/or a recording frequency as well as the information to be recorded, as data and/or parameters and/or adjustments of the hearing device are adjusted freely or are programmable, respectively. Furthermore, a hearing device is described that is suitable to use the method. By the present invention, a multitude of the parameters being adjustable in a hearing device can be checked or surveyed all together or selectively in real, i.e. actually existing acoustic environments in order to optimally adjust or adapt the hearing device afterwards, that means after the analysis by the fitter, for example.--
